## **TC-300 Series Thermostatic Capsule Steam Traps**

Carbon Steel

For Pressures to 17 bar...Cold Water Start-up Capacities to 454 kg/h

## Description

The TC-300 is sized precisely to handle the extremely low condensate load found in most instrument steam tracer lines. The TC-300 traps are designed to last longer than other oversized, all-purpose thermostatic and thermodynamic steam traps.

This steam trap adjusts automatically to flow rates, including large start-up loads, at all pressures within its range.

## How to Order

Specify: Model Number, Size and type of pipe connection. When flanges are required, specify type of flange in detail.

Maximum operating pressure	17 barg @ 204 °C

All dimensions and weights are approximate. Use certified print for exact dimensions. Design and materials are subject to change without notice.

<sup>\*\*</sup> Capacities will vary with the degree of subcooling. When greater capacities are required, the trap will automatically adjust to the load, up to the maximum (cold water) capacity shown, by increasing the amount of subcooling.

<sup>+</sup> May be derated depending on flange rating and type. \*\*\* Standard flanges are in carbon steel, ASTM A350 LF2 are optional.
